

On-farm pilot testing is occurring in 2 cohorts

To assess/validate the model with real farm data and ensure it works for all farm types

Cohort 1 & 2 pilot farms cover many areas of the US and management styles

- Cohort 2 (confirmed)
- Cohort 2 (tentative)

Size: 60-30,000 * Need smaller farms

Regions: more needed across the southern US

Data collection is the "easy" part... output from the model will come

- Collect data on animal, manure, crop/soil, and feed storage modules
- Collect yield data, soil sampling data, milk production data to compare and validate model
- In January, will have output for farmers who participated in pilot process

Thank you!
