

Ruminant Farm Systems Model

February 2021

Taylor L Hansen, Ph.D. & Kristan Reed, Ph.D.

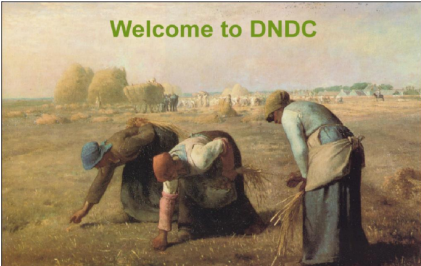

Many models out already out there....

Integrated Farm System Model
Version 4.5

USDA / Agricultural Research Service
Pasture Systems and Watershed
Management Research Unit
University Park, Pennsylvania

Welcome to DNDC

Soil & Water
Assessment Tool

United States Department of Agriculture
Natural Resources Conservation Service

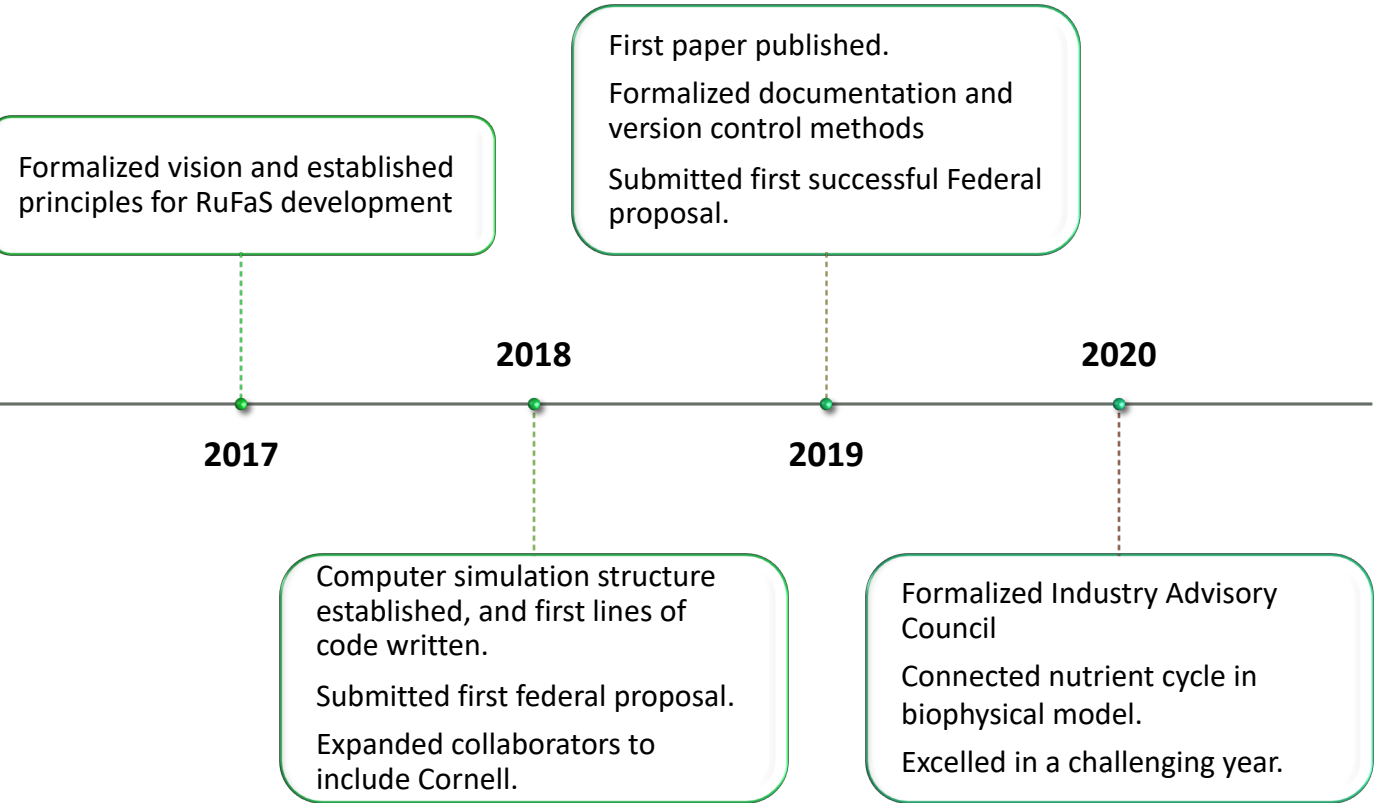

Whole Farm and Ranch
Carbon and Greenhouse Gas
Accounting System.

RuFaS Founders

RuFaS Evolution

RuFaS Goals

Interoperable

Documented

Open Source

Sustainable

Participatory Modeling

- Involves stakeholders in all parts of the model development
 - 2020: Stakeholder Advisory Council
- Creates a shared understanding of the system, the problem and the solutions
- Increases stakeholder ownership of the research outcomes

SYSTEMS ENGINEERING

Initial Variables

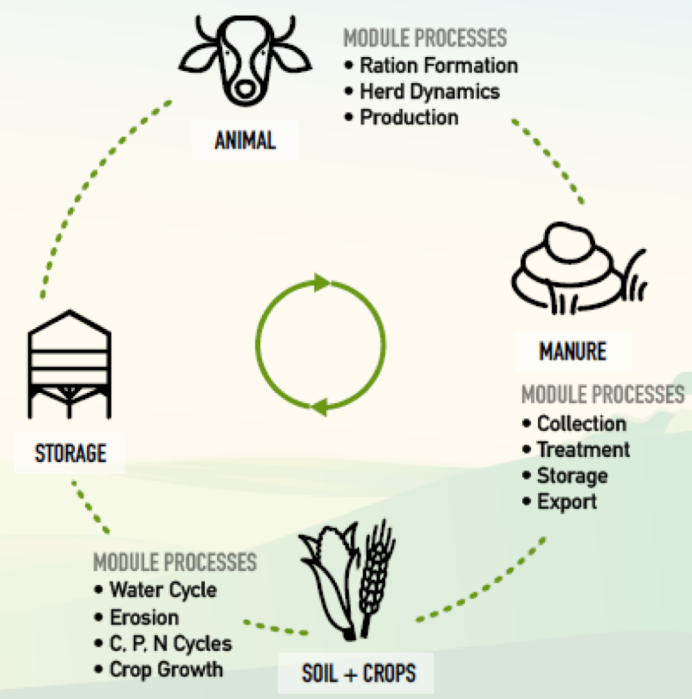

Connect modules to optimize system and linkages

Predict an Outcome

of each of these four biophysical module's equation

NUTRIENT CYCLE

SYSTEM BALANCE

Summarize

resource use, GHG emissions, and costs of production based on biophysical modules

Output and Implementation

Connect modules to optimize linkages. Distribute data for scaling, research and policy purposes

SYSTEMS ENGINEERING

Ruminant Farm Systems (RuFaS) Model

RuFaS: Soil and Crop

**Kristan Reed, Peter Vadas,
Jacob Johnson, Max Donovan, Michael Tang,
and Hector Menendez III**

Cornell University

WISCONSIN
UNIVERSITY OF WISCONSIN-MADISON

**U.S. Dairy Forage
Research Center**

Leading the world
in integrated
dairy forage
systems research.

Soil + Crop

Feed Storage

Harvest - Default Rotation

Storage grouped by:

- *Crop type*
- *Harvest date*
- *Crop quality*

Feed out:

- *Prioritize lactating cows*

Ruminant Farm Systems Model: Animal Module

WINTER 2021

Animal Module

RufaS: Manure module

Modeling greenhouse gas emissions from dairy housing and manure management system

Dr. Greg Thoma, Vempalli Sudharsan Varma, Max Donovan, and
Yunus Mohammed

Manure Module

Cornell University

System Balance

Summarizing the biophysical module into useful economic, energy, and GHG reports.

2021 Publication Goals

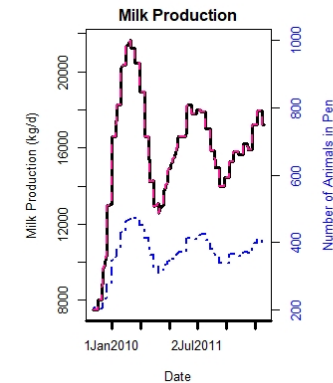

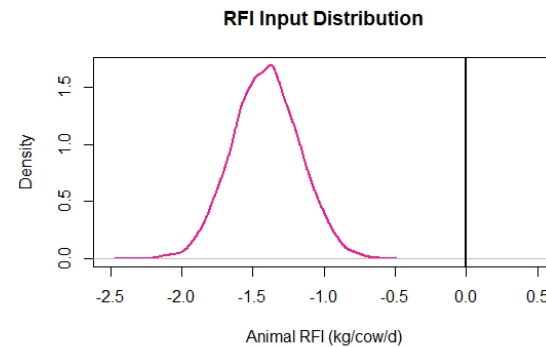

- 1.** Ration Optimization
- 2.** Animal Life Cycle
- 3.** Milk Production
- 4.** Animal Module/RFI Example
- 5.** Crop + Soil Module
- 6.** Manure Module

Case Study: Residual Feed Intake

Objectives: Compare production and environmental outcomes of herds with different feed efficiencies

Methods:

- Implement **animal level** efficiency parameter
- Estimate feed use and milk, manure, and enteric methane production for a normal and high-efficiency herd

Next Steps

Anticipate researcher model
available Spring 2022

1. Continued Optimization

- *New modules, more flexibility*

2. Pilot Testing

- *On farm assessment of model*

3. Connecting with Dairy Brain
