

RuFaS

Ruminant Farm Systems Model

The Next Generation of Whole Farm Modeling

December 2021 Update

What is RuFaS?

A Next-Generation,
Whole-Farm,
Dairy Sustainability
Simulation Model

- Simulates dairy farm production and environmental impact
- Identifies ways to improve efficiency and sustainability
- Has a range of applications, from a research tool for scientists to a decision-aid tool for the dairy industry
- Coding emphasizes transparency and accessibility to ensure model flexibility, clarity, adaptability, and persistence

Environmental Impacts of Dairy Production

Dairy production currently accounts for 2-4% of US GHG emissions

Using current technology, we can reduce GHG intensity of milk from 1.9 kg CO₂-eq/kg to zero

Using existing practices, we can reduce nitrogen & phosphorous losses per kg of milk by 20-40%

Created with BioRender.com

Many models are already out there

- Dairy contributions to climate change are widely discussed but difficult to measure.
- Companies and NGOs need tools to quantify dairy farm emissions and help suppliers achieve net zero emissions.
- Existing models do not capture the complex dynamics on dairy farms, so confusion and mistrust has arisen among dairy industry users.

Integrated Farm System Model
Version 4.5

USDA / Agricultural Research Service
Pasture Systems and Watershed
Management Research Unit
University Park, Pennsylvania

FARM Environmental Stewardship

Version 2 Updates

Whole Farm and Ranch
Carbon and Greenhouse Gas
Accounting System.

RuFaS Goals

Interoperable

Documented

Open Source

Sustainable

Participatory Modeling

- Involves stakeholders in all parts of the model development
 - 2020: Stakeholder Advisory Council
- Creates a shared understanding of the system, the problem and the solutions
- Increases stakeholder ownership of the research outcomes

RuFaS Informs Decision-Makers

Extension Specialists

Use RuFaS to compare system impacts of proposed management practices before implementation

CAFO Planners

Use RuFaS to compare proposed management impacts on nutrient management plans before implementation

NGO Project Planners

Use RuFaS to compare system impacts of proposed projects

Farmers and Consultants

Use RuFaS to track progress of different management practices and inform future decisions

Dairy Processors

Use RuFaS to verify that claims meet company standards

Ecosystem Service Markets

Use RuFaS to quantify ecosystem services

Founders

Key Stakeholders

Cornell University

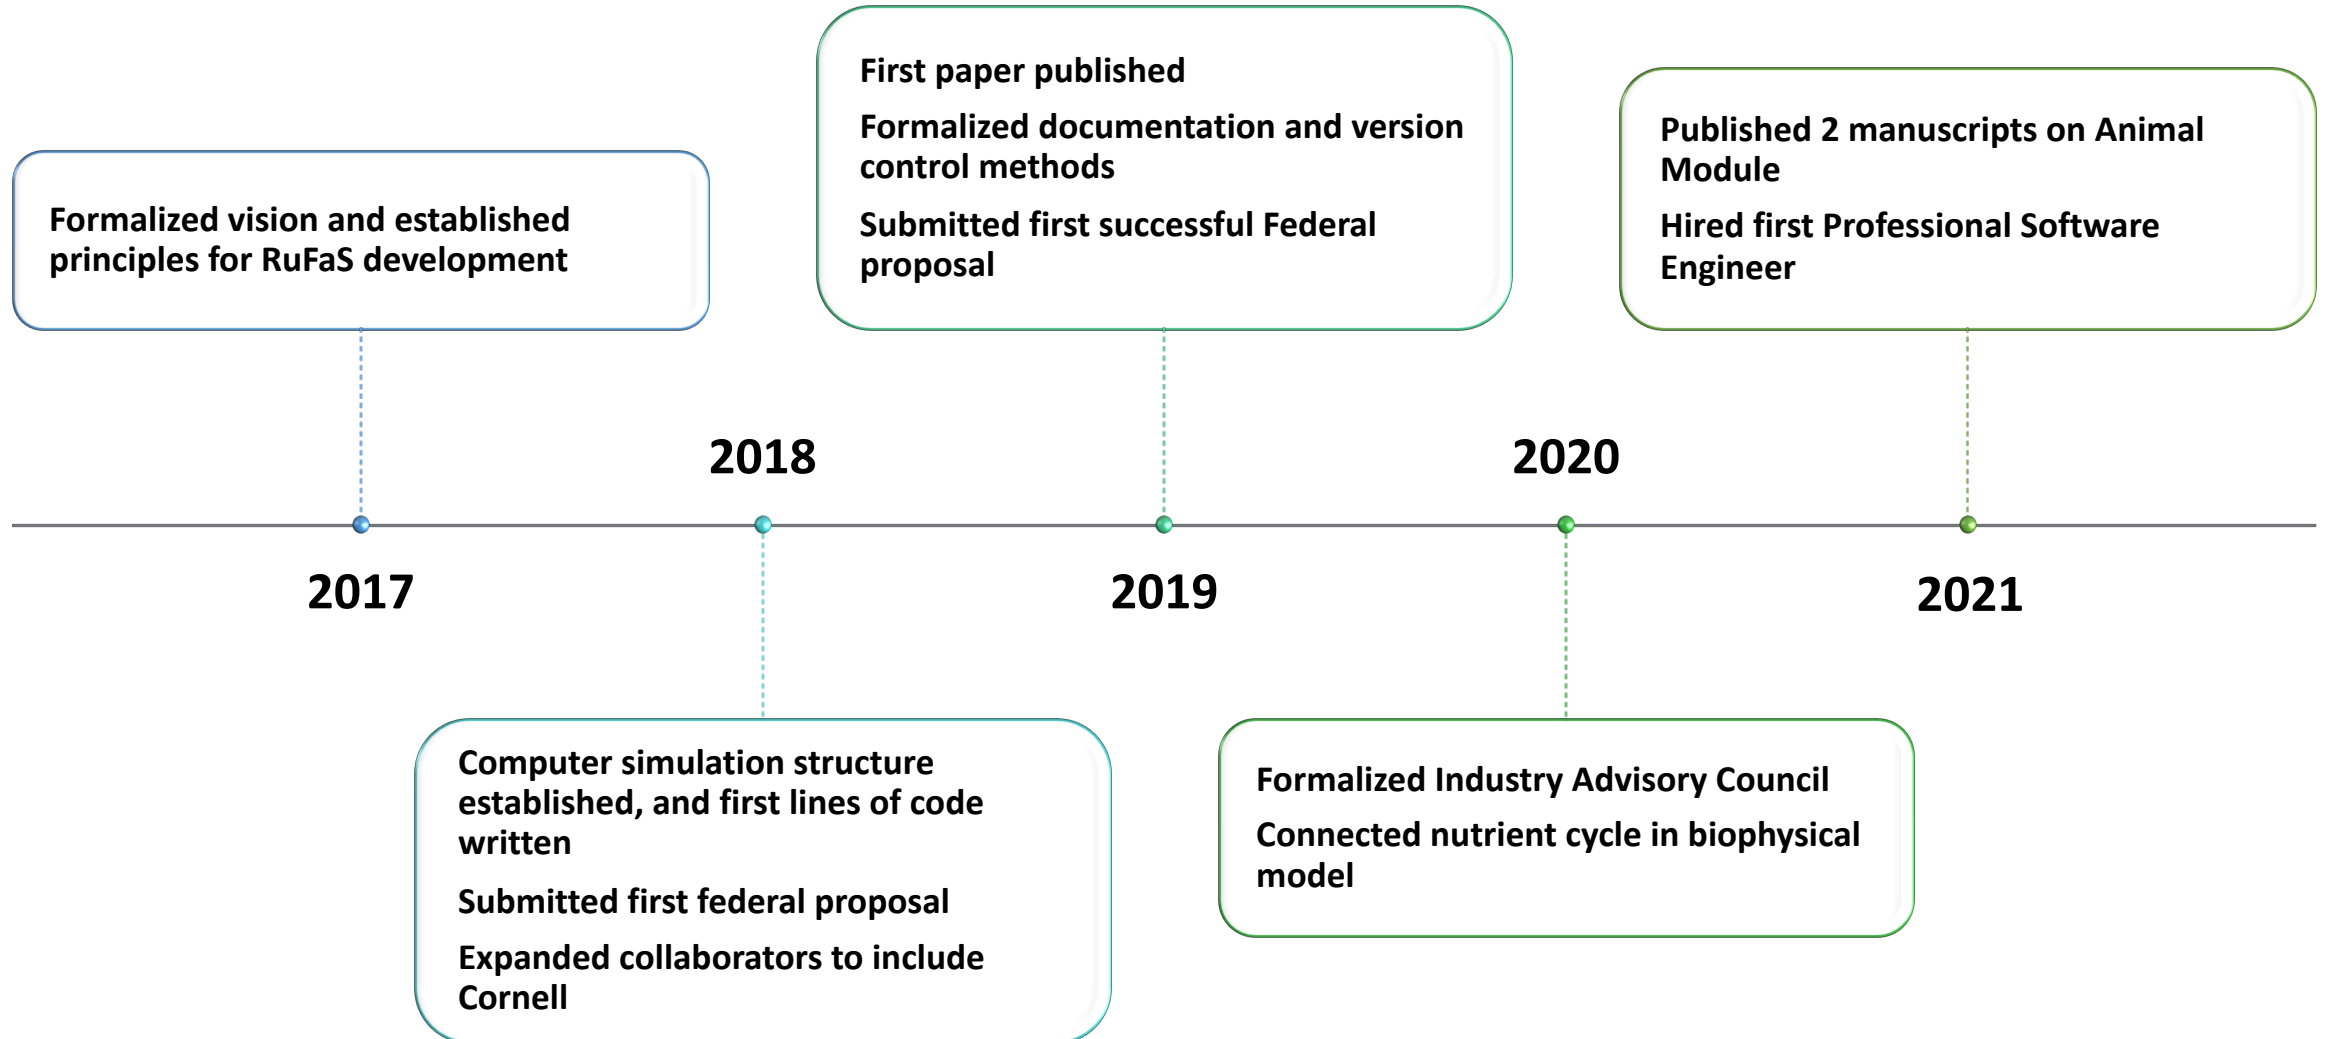

UNIVERSITY OF ARKANSAS

UNIVERSITY OF SOUTH DAKOTA

Evolution

Formalized vision and established principles for RuFaS development

2017

2018

Computer simulation structure established, and first lines of code written
Submitted first federal proposal
Expanded collaborators to include Cornell

2019

First paper published
Formalized documentation and version control methods
Submitted first successful Federal proposal

2020

Formalized Industry Advisory Council
Connected nutrient cycle in biophysical model

2021

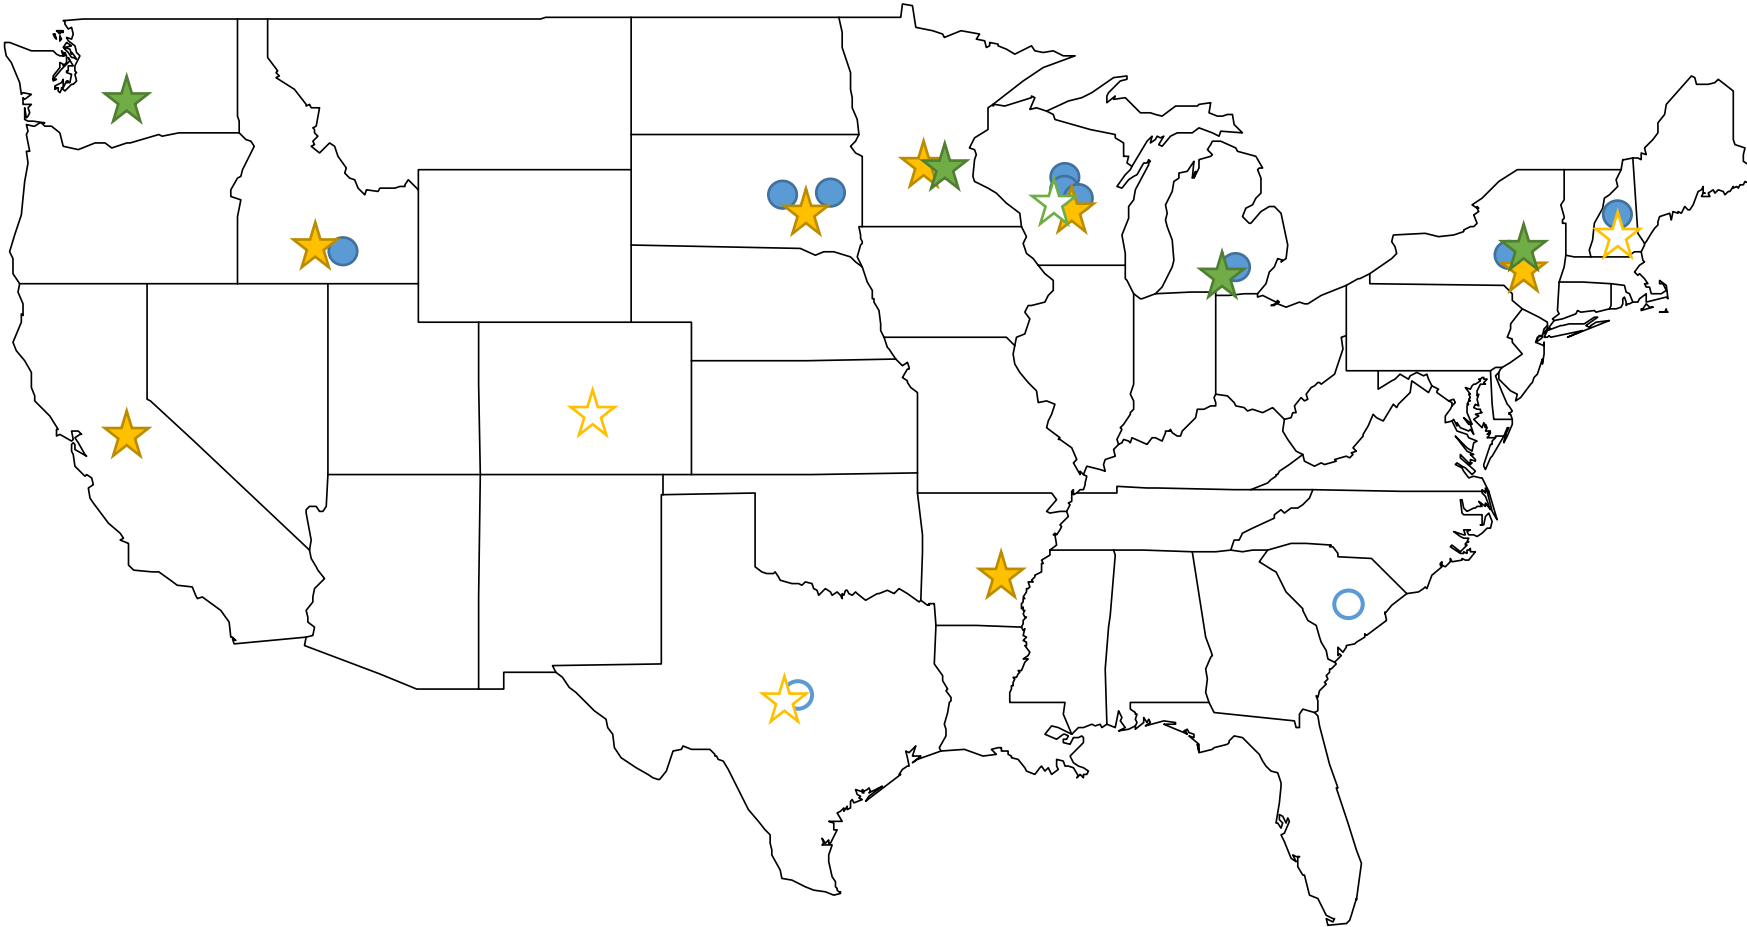

Published 2 manuscripts on Animal Module
Hired first Professional Software Engineer

How Does RuFaS Work?

Ruminant Farm Systems (RuFaS) Model

Geographic Footprint

-  Team Members
-  Pilot Farms
-  Experimental Data

Vision of Success

Created by Rutmer Zijlstra
from Noun Project

Footprinting

Calculate baseline estimates
of current farm outputs and
environmental
outcomes

Created by Aficons
from Noun Project

Planning

Identify management
practices that will generate
progress towards your
sustainability goals

Created by mynamepong
from Noun Project

Implementation

Implement management
plan, track progress, strive for
continuous improvement

Created by Made x Made
from Noun Project

Impacts

Achieve industry-wide
progress towards sustainable
dairy production

Acceleration Plan 2021-22

1

Software engineer prepares model for pilot testing

Timeline: Early Fall 2021, new features by Summer 2022

2

RuFaS team develops grazing module

Timeline: Begin Summer 2021, target initial version by Fall 2022

3

Post-docs evaluate existing RuFaS model

Timeline: Begin Summer 2022

4

RuFaS team start pilot testing in North East and Michigan with partners

When: Begin Spring 2022

5

Link to other pilots and initiatives

When: Ongoing

6

Gather input and develop user interface

When: Winter 2021 – Winter 2022
